

WAVES INSTRUCTOR EXTRAVAGANZA!

2 Nights (1 or both)

ME IC CEU HRS!

 Monday 5/13/24 5p-10p

Keeping it Real: Effective Simulation on a Budget

5 PM - 6 PM

Shooting Patients: EMS and Fire Photography

6 PM - 8 PM

Hollywood Squares: Effective Zoom Teaching

8 PM - 10 PM

Registration link for the Instructor Conference Night 1 (all 5 classes):

<https://square.link/u/RUAoXu9X>

 Thursday 5/16/24 5p-10p

The Great Instructor Review

5 PM - 8 PM

Putting the Fun Back in Dysfunctional: Building a
CQI Based Training Program

8 PM - 10 PM

Registration link for the Instructor Conference Night 2 (all 5 classes):

<https://square.link/u/nMAk4CLW>

For BOTH nights (10 hrs CEU) use this link:

<https://square.link/u/2QsgAFqo>

For individual course registration, please see links listed on MEMS Licensing Course platform or on the full schedule and course descriptions on the following pages.

Get your IC CEUs done!

We're excited to announce 10 hours of CEU for Instructor Coordinators which you can attend via Zoom!

Cost: \$12/1 hr of class
\$50 for each full night,
5 hrs of classes (\$10 savings)

Only \$90 for both nights, 10 hrs CEU (\$30 savings!).

All classes are MEMS Approved, accepted by NREMT as VILT In person online training.

WAVES Instructor Extravaganza!

Schedule and Course Description

Monday May 13, 2024 Pt 1

5-6p Keeping it Real: Effective Simulation on a Budget

Are you looking to improve your simulation but not sure you have the budget for it? Unsure simulation really is effective and the right tool to teach your students? This fun look at simulation tips, tricks, tools and resources will help you improve educational experiences for your students and make scenario training more realistic without breaking the bank. Our journey will convince you that simulation is not only an important piece to training street ready EMTs and paramedics, but can also be done no matter what your budget!

Registration Link for this class only (\$12): <https://square.link/u/zIpiMOY3>

6-8p Shooting Patients: EMS and Fire Photography

A picture tells a thousand words. This has been a key element of photography since it's inception, to tell the story. What if you could jazz up your presentations by incorporating more pictures into them as you build your courses? Would you know what elements of good photography make a picture worth using, how to get better pictures when you do? How about the legalities of pictures with using your own, others found on the internet and emerging AI applications? What about laws related to patient consent, HIPAA and more? This class will help you answer those questions and more so you can use the best practices you need to pare down that text in your next presentation and use a picture to tell a story that your students won't forget!

8-10p Hollywood Squares: Effective Zoom Teaching

Things have changed dramatically in the last few years, including in EMS education. As a result, many instructors had to drop back and punt, coming up with rapid solutions to continue delivering quality education while dealing with restrictions. As we emerged from COVID, we've seen the changed face of training and understand that online courses or at least supplemental resources can be an amazing opportunity to provide training in the future when we can't get together in person for whatever reason. Why be limited by time, training space, shift differences, and other issues that affect in person training? We'll explore best practices for online training, options for platforms and tips and tricks to provide effective, engaging and fun training online, anytime!

Thursday May 16, 2024 Pt 2

5-8p The Great Instructor Review

Teaching ISN'T easy! It also certainly isn't accurately portrayed by the age old insult "Those who can't do, teach". My philosophy is "those who do BETTER, teach!" because we understand the content, the curricula, the effort and hard work it takes to not only teach but run a program effectively, whether it is a licensure program, NCCR or CEU course. Our job is to make EMTs from Basic to Paramedic, and make them better at their job. This requires passion and a desire to make our students a success. This "soup to nuts" review of teaching and running education programs will cover everything from course administration and classroom management, teaching methods and learning styles, legal issues and evaluations concluding with a discussion on best practices in training.

Registration Link for this class only (\$36): <https://square.link/u/4KAwIC8K>

8-10p Putting the Fun Back in Dysfunctional: Building a CQI Based Training Program

You've all seen agencies that use Quality Assurance programs as a punitive system to try and solve issues. The problem with that is, that's not how CQI should work. The idea behind CQI is to identify issues and improve the medical care and customer experience your EMS agency provides. This class will tackle elements of building an effective CQI program and how to integrate it with appropriate training to address patient care issues both as your agency experiences them as well as proactively to avoid those problems before they develop. CQI can be a useful tool and done right it can be the key to education that will make your agency excel!
